

Fret

Fret is a new sustainable acoustic absorber system created from 100% polyester fibres, with at least 30% recycled content, and created out of post-consumer recycled material (PET bottle-flake), providing a sustainable acoustic panel alternative to traditional fabric wrapped fiberglass.

Fret is available in a range of thicknesses, densities, colours and finishes, offering an amazing array of options and solutions.

Fret can be used as wall panels, room and desk dividers, and as acoustical ceiling solutions. Other solutions such as office phone booths, canopies, room dividers, screens or pinboards are also available. The panels are simple and quick to install as well as lightweight, making them the ideal material for commercial, hospitality and institutional projects.

Options:

- Up to 2400x1200 coloured
- Up to 2000x1000 grey
- Thickness: 12, 15, 24, 27, 36, and 45mm
